The FS Series range is the result of years of work and improvement, developing a product of great structural rigidity. It is a heavy, oversized machine to ensure the best possible response in limit working conditions. The different FS Series models offer a great range of working capabilities thanks to their different itineraries, which enable the machining of big parts that used to require a much bigger machine. The standard equipment of the FS Series includes an automatic milling head that enables a great number of machining angles thanks to its 1° back turn and 2,5° front turn. This allows for the machining of more than 5 sides without having to move the part, which saves time and space and makes the work more dynamic. Its power and R.P.M. enables work in first rough milling operations and in part finish operations.
